

Overview of the Ethical Dimensions of Scientific Research

Module One

**Series: Ethical Dimensions of
Nano Science and Technology**

Author: Erich W. Schienke

THE WORK (AS DEFINED BELOW) IS PROVIDED UNDER THE TERMS OF THIS CREATIVE COMMONS PUBLIC LICENSE ("CCPL" OR "LICENSE"). THE WORK IS PROTECTED BY COPYRIGHT AND/OR OTHER APPLICABLE LAW. ANY USE OF THE WORK OTHER THAN AS AUTHORIZED UNDER THIS LICENSE OR COPYRIGHT LAW IS PROHIBITED.

BY EXERCISING ANY RIGHTS TO THE WORK PROVIDED HERE, YOU ACCEPT AND AGREE TO BE BOUND BY THE TERMS OF THIS LICENSE. TO THE EXTENT THIS LICENSE MAY BE CONSIDERED TO BE A CONTRACT, THE LICENSOR GRANTS YOU THE RIGHTS CONTAINED HERE IN CONSIDERATION OF YOUR ACCEPTANCE OF SUCH TERMS AND CONDITIONS.

1. Definitions

"Adaptation" means a work based upon the Work, or upon the Work and other pre-existing works, such as a translation, adaptation, derivative work, arrangement of music or other alterations of a literary or artistic work, or phonogram or performance and includes cinematographic adaptations or any other form in which the Work may be recast, transformed, or adapted including in any form recognizably derived from the original, except that a work that constitutes a Collection will not be considered an Adaptation for the purpose of this License. For the avoidance of doubt, where the Work is a musical work, performance or phonogram, the synchronization of the Work in timed-representation with a moving image ("synching") will be considered an Adaptation for the purpose of this License.

"Collection" means a collection of literary or artistic works, such as encyclopedias and anthologies, or performances, phonograms or broadcasts, or other works or subject matter other than works listed in Section 1(g) below, which, by reason of the selection and arrangement of their contents, constitute intellectual creations, in which the Work is included in its entirety in unmodified form along with one or more other contributions, each constituting separate and independent works in themselves, which together are assembled into a collective whole. A work that constitutes a Collection will not be considered an Adaptation (as defined above) for the purposes of this License.

"Distribute" means to make available to the public the original and copies of the Work or Adaptation, as appropriate, through sale or other transfer of ownership.

"License Elements" means the following high-level license attributes as selected by Licensor and indicated in the title of this License: Attribution, Noncommercial, ShareAlike.

"Licensor" means the individual, individuals, entity or entities that offer(s) the Work under the terms of this License.

"Original Author" means, in the case of a literary or artistic work, the individual, individuals, entity or entities who created the Work or if no individual or entity can be identified, the publisher; and in addition (i) in the case of a performance the actors, singers, musicians, dancers, and other persons who act, sing, deliver, declaim, play in, interpret or otherwise perform literary or artistic works or expressions of folklore; (ii) in the case of a phonogram the producer being the person or legal entity who first fixes the sounds of a performance or other sounds; and, (iii) in the case of broadcasts, the organization that transmits the broadcast.

"Work" means the literary and/or artistic work offered under the terms of this License including without limitation any production in the literary, scientific and artistic domain, whatever may be the mode or form of its expression including digital form, such as a book, pamphlet and other writing; a lecture, address, sermon or other work of the same nature; a dramatic or dramatico-musical work; a choreographic work or entertainment in dumb show; a musical composition with or without words; a cinematographic work to which are assimilated works expressed by a process analogous to cinematography; a work of drawing, painting, architecture, sculpture, engraving or lithography; a photographic work to which are assimilated works expressed by a process analogous to photography; a work of applied art; an illustration, map, plan, sketch or three-dimensional work relative to geography, topography, architecture or science; a performance; a broadcast; a phonogram; a compilation of data to the extent it is protected as a copyrightable work; or a work performed by a variety or circus performer to the extent it is not otherwise considered a literary or artistic work.

"You" means an individual or entity exercising rights under this License who has not previously violated the terms of this License with respect to the Work, or, where applicable, has received permission from the Licensor to exercise rights under this License despite a previous violation.

"Publicly Perform" means to perform public recitations of the Work and to communicate to the public those public recitations, by any means or process, including by wire or wireless means

or public digital performances; to make available to the public Works in such a way that members of the public may access these Works from a place and at a place individually chosen by them; to perform the Work to the public by any means or process and the communication to the public of the performances of the Work, including by public digital performance; to broadcast and rebroadcast the Work by any means including signs, sounds or images.

"Reproduce" means to make copies of the Work by any means including without limitation by sound or visual recordings and the right of fixation and reproducing fixations of the Work, including storage of a protected performance or phonogram in digital form or other electronic medium.

2. Fair Dealing Rights. Nothing in this License is intended to reduce, limit, or restrict any uses free from copyright or rights arising from limitations or exceptions that are provided for in connection with the copyright protection under copyright law or other applicable laws.

3. License Grant. Subject to the terms and conditions of this License, Licensor hereby grants You a worldwide, royalty-free, non-exclusive, perpetual (for the duration of the applicable copyright) license to exercise the rights in the Work as stated below:

To Reproduce the Work, to incorporate the Work into one or more Collections, and to Reproduce the Work as incorporated in the Collections;

To create and Reproduce Adaptations provided that any such Adaptation, including any translation in any medium, takes reasonable steps to clearly label, demarcate or otherwise identify that changes were made to the original Work. For example, a translation could be marked "The original work was translated from English to Spanish," or a modification could indicate "The original work has been modified.";

To Distribute and Publicly Perform the Work including as incorporated in Collections; and,

To Distribute and Publicly Perform Adaptations.

The above rights may be exercised in all media and formats whether now known or hereafter devised. The above rights include the right to make such modifications as are technically necessary to exercise the rights in other media and formats. Subject to Section 8(f), all rights not expressly granted by Licensor are hereby reserved, including but not limited to the rights described in Section 4(e).

4. Restrictions. The license granted in Section 3 above is expressly made subject to and limited by the following restrictions:

You may Distribute or Publicly Perform the Work only under the terms of this License. You must include a copy of, or the Uniform Resource Identifier (URI) for, this License with every copy of the Work You Distribute or Publicly Perform. You may not offer or impose any terms on the Work that restrict the terms of this License or the ability of the recipient of the Work to exercise the rights granted to that recipient under the terms of the License. You may not sublicense the Work. You must keep intact all notices that refer to this License and to the disclaimer of warranties with every copy of the Work You Distribute or Publicly Perform. When You Distribute or Publicly Perform the Work, You may not impose any effective technological measures on the Work that restrict the ability of a recipient of the Work from You to exercise the rights granted to that recipient under the terms of the License. This Section 4(a) applies to the Work as incorporated in a Collection, but this does not require the Collection apart from the Work itself to be made subject to the terms of this License. If You create a Collection, upon notice from any Licensor You must, to the extent practicable, remove from the Collection any credit as required by Section 4(d), as requested.

If You create an Adaptation, upon notice from any Licensor You must, to the extent practicable, remove from the Adaptation any credit as required by Section 4(d), as requested. You may Distribute or Publicly Perform an Adaptation only under: (i) the terms of this License; (ii) a later version of this License with the same License Elements as this License; (iii) a Creative Commons jurisdiction license (either this or a later license version) that contains the same License Elements as this License (e.g., Attribution-NonCommercial-ShareAlike 3.0 US) ("Applicable License"); You must include a copy of, or the URI, for Applicable License with every copy of each Adaptation You Distribute or Publicly Perform. You may not offer or impose any terms on the Adaptation that restrict the terms of the Applicable License or the ability of the recipient of the Adaptation to exercise the rights granted to that recipient under the terms of the Applicable License. You must keep intact all notices that refer to the Applicable License and to the disclaimer of warranties with every copy of the Work as included in the Adaptation You Distribute

or Publicly Perform. When You Distribute or Publicly Perform the Adaptation, You may not impose any effective technological measures on the Adaptation that restrict the ability of a recipient of the Adaptation from You to exercise the rights granted to that recipient under the terms of the Applicable License. This Section 4(b) applies to the Adaptation as incorporated in a Collection, but this does not require the Collection apart from the Adaptation itself to be made subject to the terms of the Applicable License.

You may not exercise any of the rights granted to You in Section 3 above in any manner that is primarily intended for or directed toward commercial advantage or private monetary compensation. The exchange of the Work for other copyrighted works by means of digital file-sharing or otherwise shall not be considered to be intended for or directed toward commercial advantage or private monetary compensation, provided there is no payment of any monetary compensation in connection with the exchange of copyrighted works.

If You Distribute, or Publicly Perform the Work or any Adaptations or Collections, You must, unless a request has been made pursuant to Section 4(a), keep intact all copyright notices for the Work and provide, reasonable to the medium or means You are utilizing: (i) the name of the Original Author (or pseudonym, if applicable) if supplied, and/or if the Original Author and/or Licensor designate another party or parties (e.g., a sponsor institute, publishing entity, journal) for attribution ("Attribution Parties") in Licensor's copyright notice, terms of service or by other reasonable means, the name of such party or parties; (ii) the title of the Work if supplied, (iii) to the extent reasonably practicable, the URI, if any, that Licensor specifies to be associated with the Work, unless such URI does not refer to the copyright notice or licensing information for the Work; and, (iv) consistent with Section 3(b), in the case of an Adaptation, a credit identifying the use of the Work in the Adaptation (e.g., "French translation of the Work by Original Author," or "Screenplay based on original Work by Original Author"). The credit required by this Section 4(d) may be implemented in any reasonable manner; provided, however, that in the case of an Adaptation or Collection, at a minimum such credit will appear, if a credit for all contributing authors of the Adaptation or Collection appears, then as part of these credits and in a manner at least as prominent as the credits for the other contributing authors. For the avoidance of doubt, You may only use the credit required by this Section for the purpose of attribution in the manner set out above and, by exercising Your rights under this License, You may not implicitly or explicitly assert or imply any connection with, sponsorship or endorsement by the Original Author, Licensor and/or Attribution Parties, as appropriate, of You or Your use of the Work, without the separate, express prior written permission of the Original Author, Licensor and/or Attribution Parties.

For the avoidance of doubt:

Non-avoidable Compulsory License Schemes. In those jurisdictions in which the right to collect royalties through any statutory or compulsory licensing scheme cannot be waived, the Licensor reserves the exclusive right to collect such royalties for any exercise by You of the rights granted under this License; Waivable Compulsory License Schemes. In those jurisdictions in which the right to collect royalties through any statutory or compulsory licensing scheme can be waived, the Licensor reserves the exclusive right to collect such royalties for any exercise by You of the rights granted under this License if Your exercise of such rights is for a purpose or use which is otherwise than non-commercial as permitted under Section 4(c) and otherwise waives the right to collect royalties through any statutory or compulsory licensing scheme; and, Voluntary License Schemes. The Licensor reserves the right to collect royalties, whether individually or, in the event that the Licensor is a member of a collecting society that administers voluntary licensing schemes, via that society, from any exercise by You of the rights granted under this License that is for a purpose or use which is otherwise than noncommercial as permitted under Section 4(c). Except as otherwise agreed in writing by the Licensor or as may be otherwise permitted by applicable law, if You Reproduce, Distribute or Publicly Perform the Work either by itself or as part of any Adaptations or Collections, You must not distort, mutilate, modify or take other derogatory action in relation to the Work which would be prejudicial to the Original Author's honor or reputation. Licensor agrees that in those jurisdictions (e.g. Japan), in which any exercise of the right granted in Section 3(b) of this License (the right to make Adaptations) would be deemed to be a distortion, mutilation, modification or other derogatory action prejudicial to the Original Author's honor and reputation, the Licensor will waive or not assert, as appropriate, this Section, to the fullest extent permitted by the applicable national law, to enable

You to reasonably exercise Your right under Section 3(b) of this License (the right to make Adaptations) but not otherwise.

5. Representations, Warranties and Disclaimer

UNLESS OTHERWISE MUTUALLY AGREED TO BY THE PARTIES IN WRITING AND TO THE FULLEST EXTENT PERMITTED BY APPLICABLE LAW, LICENSOR OFFERS THE WORK AS-IS AND MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND CONCERNING THE WORK, EXPRESS, IMPLIED, STATUTORY OR OTHERWISE, INCLUDING, WITHOUT LIMITATION, WARRANTIES OF TITLE, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, NONINFRINGEMENT, OR THE ABSENCE OF LATENT OR OTHER DEFECTS, ACCURACY, OR THE PRESENCE OF ABSENCE OF ERRORS, WHETHER OR NOT DISCOVERABLE. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OF IMPLIED WARRANTIES, SO THIS EXCLUSION MAY NOT APPLY TO YOU.

6. Limitation on Liability. EXCEPT TO THE EXTENT REQUIRED BY APPLICABLE LAW, IN NO EVENT WILL LICENSOR BE LIABLE TO YOU ON ANY LEGAL THEORY FOR ANY SPECIAL, INCIDENTAL, CONSEQUENTIAL, PUNITIVE OR EXEMPLARY DAMAGES ARISING OUT OF THIS LICENSE OR THE USE OF THE WORK, EVEN IF LICENSOR HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. Termination

This License and the rights granted hereunder will terminate automatically upon any breach by You of the terms of this License. Individuals or entities who have received Adaptations or Collections from You under this License, however, will not have their licenses terminated provided such individuals or entities remain in full compliance with those licenses. Sections 1, 2, 5, 6, 7, and 8 will survive any termination of this License. Subject to the above terms and conditions, the license granted here is perpetual (for the duration of the applicable copyright in the Work). Notwithstanding the above, Licensor reserves the right to release the Work under different license terms or to stop distributing the Work at any time; provided, however that any such election will not serve to withdraw this License (or any other license that has been, or is required to be, granted under the terms of this License), and this License will continue in full force and effect unless terminated as stated above.

8. Miscellaneous

Each time You Distribute or Publicly Perform the Work or a Collection, the Licensor offers to the recipient a license to the Work on the same terms and conditions as the license granted to You under this License.

Each time You Distribute or Publicly Perform an Adaptation, Licensor offers to the recipient a license to the original Work on the same terms and conditions as the license granted to You under this License.

If any provision of this License is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this License, and without further action by the parties to this agreement, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

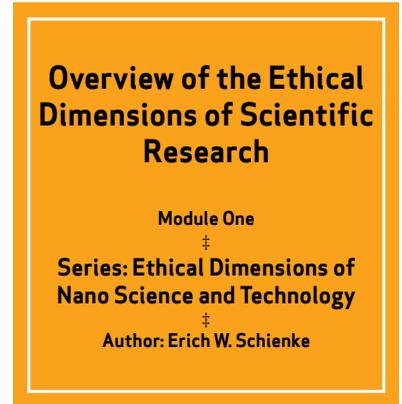

No term or provision of this License shall be deemed waived and no breach consented to unless such waiver or consent shall be in writing and signed by the party to be charged with such waiver or consent.

This License constitutes the entire agreement between the parties with respect to the Work licensed here. There are no understandings, agreements or representations with respect to the Work not specified here. Licensor shall not be bound by any additional provisions that may appear in any communication from You. This License may not be modified without the mutual written agreement of the Licensor and You.

The rights granted under, and the subject matter referenced, in this License were drafted utilizing the terminology of the Berne Convention for the Protection of Literary and Artistic Works (as amended on September 28, 1979), the Rome Convention of 1961, the WIPO Copyright Treaty of 1996, the WIPO Performances and Phonograms Treaty of 1996 and the Universal Copyright Convention (as revised on July 24, 1971). These rights and subject matter take effect in the relevant jurisdiction in which the License terms are sought to be enforced according to the corresponding provisions of the implementation of those treaty provisions in the applicable national law. If the standard suite of rights granted under applicable copyright law includes additional rights not granted under this License, such additional rights are deemed to be included in the License; this License is not intended to restrict the license of any rights under applicable law.

MODULE INTRODUCTION

- This educational module provides users with concepts and examples for the development of ethical tools for analysis. Ethical tools are used to identify and design towards optimal solutions that satisfy a wide variety of ethical dimensions.
- Users of this module, and any module within the Ethical Dimensions of Scientific Research series, are enhancing and refining their moral literacy.
- We present here a unified approach for understanding, engaging, and responding to questions concerning ethical and moral behavior encountered in the production and application of research. A unified approach, though, does not mean that it is universal and applicable to all contexts.
- One issue always worthy of consideration concerns addressing, “who bears the burden of intended and unintended consequences of our research?”

RESEARCH ETHICS

- *Scientific research* comprises more than just studies within a lab setting.
- The production of scientific research is tied to politics, social needs, public funding, venture capital, human health, environmental security, and economic development, as well as many other concerns of human society.
- Research ethics as broadly defined, thus, are a matter of:
 - responsible professional conduct fitting to the norms of a research community (procedural ethics);
 - require a consideration of the broader social, political, and economic impacts (extrinsic ethics);
 - and, point to where (social, personal, institutional) values and preferences become embedded in the analytical inputs and outputs of research itself (intrinsic ethics).

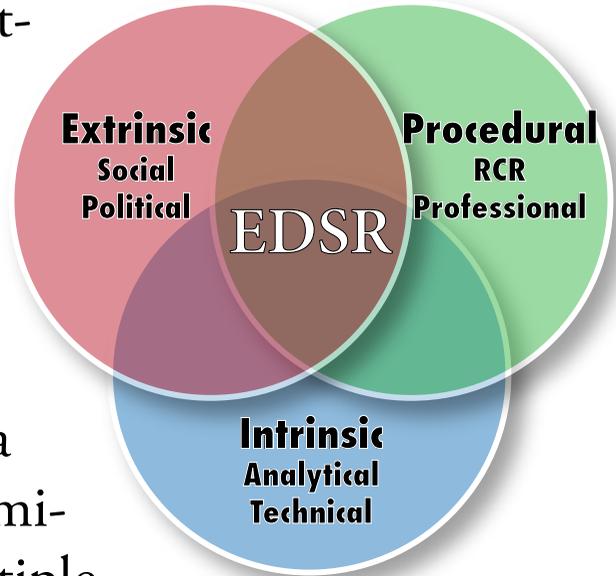

Consequences

- Choices made during research have ethical consequences.
- It is not always obvious what is right and wrong behavior in certain situations.
- Understanding how to make good choices as practitioners and leaders in the field of nanotechnology will require both scientific knowledge and an awareness of the various positions along with projected trade-offs.
- Tenured jobs are lost over research ethics violations, foreign nationals can be deported over non-compliance when researching on government funds, entire labs have been closed due to ethics violations.
- The key is to learn both about ethics by improving your ethical and moral literacy and where to go to learn more—find someone you can talk with.

Not paying attention to ethical norms and proper research conduct can impact careers.

Ethical Dimensions

- Research ethics is not a matter of memorization of rules about proper behavior. Rather, it is important to approach learning research ethics as the skill of being able to derive the ethics of a given situation, by asking similar key questions across multiple situations.

- As developed in the EDSR approach, three main categorical distinctions for research ethics used here are:
- broader social and political impacts of research (extrinsic ethics);
- research practice and conduct (procedural ethics);
- and embedded values within research (intrinsic ethics).

PROCEDURAL ETHICS

- There are ethical considerations of how to proceed in the course of conducting any manner of scientific research.
- These are referred to as procedural ethics and signify the typical areas of responsible conduct of research, including issues such as falsification of data, fabrication of data, and plagiarism, as well as considerations around conflicts of interest, research misconduct, treatment of human and animal subjects, and responsible authorship.
- *Every job occupied, every grant received and every paper published by someone who engages in misconduct deprives at least one honest scientist of an opportunity to which he or she was entitled.” Herbert N. Arst, Jr., Imperial College School of Medicine, London. Nature 403:478, 2000.*

Nine main areas to consider in the Responsible Conduct of Research:

- **Data Acquisition, Management, Sharing and Ownership**
- **Conflict of Interest and Commitment**
- **Human Subjects**
- **Animal Welfare**
- **Research Misconduct**
- **Publication Practices and Responsible Authorship**
- **Mentor / Trainee Responsibilities**
- **Peer Review**
- **Collaborative Science**

Falsification, Fabrication, Plagiarism

- Known as the three “cardinal sins” of research conduct, **falsification**, **fabrication**, and **plagiarism** (FFP) are the primary concerns in avoiding research misconduct.
- *Falsification* is the changing or omission of research results (data) to support claims, hypotheses, other data, etc.
- *Fabrication* is the construction and/or addition of data, observations, or characterizations that never occurred in the gathering of data or running of experiments.
- *Plagiarism* is using or representing the work of others as your own work. Not properly citing sources is one of the most common forms of research misconduct.

Conflicts of Interest

- Personal obligations, connections to other institutions, participation in other research programs, or drawing from competing pools of funding can influence one's capacity to be impartial in a given situation.
- Knowing when we are or are not able to think outside of our other interests is crucial to understanding how to avoid possible conflicts of interest.
- The key to avoiding possible conflicts of interest is transparency of plausible interest in a given situation. Reveal all relevant connections to the case at hand.
- Recuse oneself from the case at hand if necessary.

Care for Data

- Data are the core of research. The recent requirements by federally funded grants to develop data management plans summarizes the imperatives here, including long-term storage of data, sharing of data, and other aspects of assuring data integrity, continuity, and federation.
- Interoperability of data, particularly across research institutions is crucial in conducting collaborative research across a large network.
- Paying attention and adhering to meta-data standards (information about data types and data structures) is of growing importance in sharing data between research communities, across disciplines, between regulatory institutions, governmental offices, and NGOs.

National Science Foundation (NSF) Data Sharing Policy:

Investigators are expected to share with other researchers, at no more than incremental cost and within a reasonable time, the primary data, samples, physical collections and other supporting materials created or gathered in the course of work under NSF grants. Grantees are expected to encourage and facilitate such sharing.

Responsible Authorship

- The identification of authors, the ordering of authors, the speed of publication of research findings, modes of research dissemination, acknowledgements, relevancy, and other aspects of publishing and disseminating findings.
- It is extremely important to adequately and accurately cite literature to give credit to those who have conducted research before you.
- It is better to be cautious and cite when unsure to avoid even the appearance of plagiarism.
- Authorship credit should go to anyone providing a substantial intellectual contribution to the paper.
- It is worth discussing authorship at the beginning of a project to avoid conflicting expectations when it comes time to publish.

“Authorship and collaboration problems are a serious threat to the research enterprise and to the motivation of young scientists, especially when they involve misappropriation of ideas and data.” Floyd E. Bloom. *Science* 287:589, 2000.

EXTRINSIC ETHICS

- Nanotechnology presents significant challenges and opportunities to questions concerning the broader impacts on societal (economic, political, cultural) and environmental (ecological, biological, land-use) domains.
- Further considerations of issues around the distribution of benefits and harms of nanotechnology need to also be taken into account, to assure, for example, that nanotechnology does not benefit only already well-off sectors of society.

Issues to consider about the extrinsic ethics of nanotechnology:

- **What are the public policy and/or legal implications of research?**
- **Are there questions around intellectual property?**
- **Is the research potentially transformative of society and/or economy?**
- **Are there dimensions of social justice that need to be considered?**
- **Are there educational dimensions to the research?**
- **Does the research take into account underrepresented groups?**
- **Are there issues about privacy that need to be considered?**
- **Are risks to health and environment being adequately considered in a precautionary manner?**
- **Have long-term considerations about future impacts been taken into account?**

Policy Implications

- Scientific research can and often does impact public policy in a manner of ways. Understanding that one's research may be applicable to informing public policy decisions or be subject to regulatory mechanisms is crucial.
- There are many three main intersections between policy and research that need to be considered, such as:
 - policy and regulation about the scientific research and/or technology (policy of science, or science policy);
 - scientific research and technological capacity often informs crucial decision-making processes, such as determination of risks and evaluation of responses (science for policy);
 - and, institutional policies in support of funding and conducting research (research management policy).

Intellectual and Personal Property

- Nanotechnology will present some of its own unique legal challenges, particularly where regulatory issues cross paths with property rights, ownership, public domain, surveillance, and privacy.
- Nanotechnology, unlike other similar technical areas (such as biotech or microelectronics) is undergoing the patenting of many fundamental processes.
- As nanotechnology is really really small, certainly working below the detection of normal human perceptions, it provides significant opportunities for the development of undetectable monitoring systems, which can bring up significant issues around molecular privacy, awareness of surveillance, and ownership of molecular information gathered from monitoring.

As of June 28th, 2011, the US Patent Office has granted 7,000 nanotechnology (Class 977) related patents.

Changes in Economy and Society

- Nano science and technology present possibilities which could potentially transform the shape of economic production, output, market arrangements, etc.
- It is crucial to ask whether the research could impact how society functions on a day-to-day basis, for example, such as how we grow food, produce energy, etc.
- The public understanding of nanotechnology presents significant challenges, particularly in trying to communicate risks, challenges etc.
- The full arrival of a nanotechnology based manufacturing will have profound effects on traditional modes of fabrication and production.

Nanotechnology - which some scientists and business leaders hail as ushering in the next technology-driven Industrial Revolution - promises to be one of the critical foundations for this new innovation economy.

Social Justice

- Most people would tend to agree with the stance that our developments in science and technology should adhere to, or at least not be entirely counter to, our notions of the common good, not harming others, not causing further hardships, etc.
- Distributive Justice (equity): are the costs, harms, and benefits of nanotechnologies being distributed equitably over society?
- Procedural Justice (due process): how are decisions about nanotechnology regulation being taken into account and who is making the decisions and choices.
- Intergenerational justice (long-term): choices made now about infrastructure, investments, longevity, and risk can have implications for generations to come.

Risk and Precaution

- Approaching any new territory in science and technology can present great payoffs and public goods, but they can also present daunting challenges that can change and shape international relations.

“Molecular manufacturing and nanotechnology are not one technology, but rather a spectrum of technologies, with radically different risk profiles.” (Foresight 2006)
- Understanding and fully defining the risks of a given technical scenario require both an analysis of the science itself (see intrinsic ethics issues on handling of uncertainty), and a projection as to how the technology could potentially cause harm or otherwise negatively impact human well-being.
- Precaution in the face of risk needs to be considered and taken into account in any case, and certain aspects of nanotechnology can present an exceptional risk to human and environmental health.

INTRINSIC ETHICS

- While considerations of procedural ethics require a framework of responsible research behavior and extrinsic ethics requires an explicit consideration of broader impacts, intrinsic ethics requires a deeper analysis of how the research itself is constructed and where certain choices being made in the line of research embed value judgements and can impact real-world outcomes.
- The basic idea of intrinsic ethics concerns choices that seem to be only considered in mathematical or within the terms of the art, yet can embed certain values and result in different implications as to the application or future direction of the nano-knowledge.

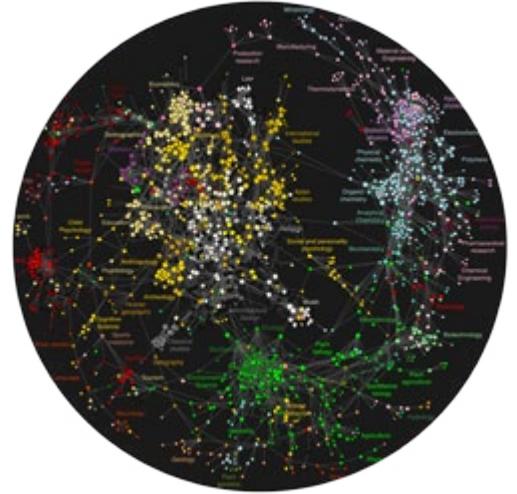

Some issues to consider about the intrinsic ethics of nanotechnology:

- **How are standards of proof, errors, and uncertainties handled in a given analysis?**
- **What constitutes empirical adequacy and how consistent are results, over how many runs?**
- **What is the scope? Are some dimensions of the analysis oversimplified?**
- **What classification typologies are being used (ontologies)?**
- **How / what methods were selected?**
- **What went into the choice of research questions?**

Framing Research

- Values and ethics become embedded within the production of research, often times, at the very decision about research topic and question.
- Choice of Research Questions: research results are inevitably impacted by the scope and range of research questions.
- Frameworks and Global Assumptions: interests of the researcher are reflected in accepting certain framework conditions, such as the representational limits of an analysis, or in choosing the values of certain variables, within a model, as being “more” representative of reality than a different variable, model, or limit.
- Causal Explanations and Narratives: causal explanations produce a conception as to what is happening within a given nanotechnology model or analysis.

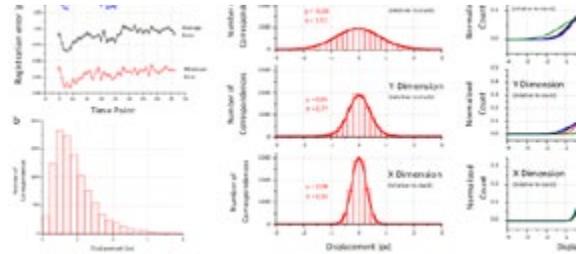

Empirical Adequacy & Simplicity

- How do we determine what we are seeing adequately supports our claims?
- Empirical Adequacy and Consistency: were adequate tests conducted to assure the phenomena observed is consistent, is the study reproducible, or is the instrumentation working within viable parameters and/or limits of observation.
- Simplicity/Scope: what is the scope of the study under consideration, is the study significantly comprehensive to be relevant to various conditions?
- Complex phenomena require complex models and descriptions. Not adding enough complexity to a research hypothesis could result in oversimplification of a situation, leaving out crucial thresholds or other limits in the system(s) under consideration.

Standards of Proof & Uncertainty

- What constitutes certainty about a given observation? How many times must it be observed to be considered “valid proof” of a particular event? What is considered to be statistically significant for a given event to be occurring?
- Standards of Proof and Handling of Uncertainties: standards of proof often incorporate social values.
- Type I and II errors can have significant impacts in nano-applications and need to be considered by researchers and peer-reviewers.

Type I error: (false positive) where the test produces a positive result when the negative result is the case, such as in a medical patient testing positive for a disease they do not have. In terms of data analysis, new information falsely changes previous estimates of uncertainty.

Type II error: (false negative) where the test produces a negative result when the positive result is the case, such as when a medical patient has an ailment that goes undetected by test(s). Regarding data, new information does not correctly change previous estimates of probability of occurrence.

Both types of errors present different costs in different contexts, and result in a choice about values.

Methods & Classifications

- Methods selection itself, can shift over the duration of the experimental process (though, hopefully not during an experiment!) of a given investigation. As we travel through the research process, we gather data about observations. This data is shaped by our selection of methods, and also conforms to our classification schemes.
- Methods Selection: choice of methods for either data collection and/or analysis reflects the context of the researcher and impact significantly the intellectual merit and framework of the nanotechnology research.
- Classifications and Ontologies: the classification of an observation or phenomena, particularly when the classification strategy is being developed, the adequacy of certain definitions, granularity of classifications, etc., can have significant impacts in later developments, lead to certain oversights, and even lead to misleading conclusions.

RESOURCES

The National Nanotechnology Infrastructure Network (NNIN) “is an integrated partnership of fourteen user facilities, supported by NSF, providing unparalleled opportunities for nanoscience and nanotechnology research. The network provides extensive support in nanoscale fabrication, synthesis, characterization, modeling, design, computation and hands-on training. in an open, hands-on environment, available to all qualified users.” <http://www.nnin.org/>

NNIN Societal and Ethical Issues (SEI) Portal

“SEI is concerned with the social and ethical dimensions of nanotechnology research, development, and application. SEI challenges the assumption that nanoscience - and science and technology in general - are merely technical affairs, understandable and describable in the language of numbers, chemistry or mathematics. Instead, it is deeply embedded in the social world and in the context of issues such as potential benefits and risks of nano-products (i.e., health, safety, and environmental) and the “problems” these products are designed to “solve.” Also of importance is how individuals - nanoscientists included - perceive and react to these issues. What are the perceived risks and benefits? Why do we emphasize certain risks and benefits over others? What “problems” are we most concerned about? Nanoscientists may not have all the answers if asked to describe the social or ethical implications of their research. However, beginning to think about them is an important first step.” <http://sei.nnin.org/>

Institute of Electrical and Electronics Engineers (IEEE)

“Through its Ethics and Member Conduct Committee, IEEE aims to: foster awareness on ethical issues; promote

ethical behavior amongst those working within IEEE fields of interest; create a world in which engineers and scientists are respected for exemplary ethical behavior.” [Review the IEEE Code of Ethics.](#) • [Review ethics cases.](#)

National Academy of Engineers (NAE)

“Founded in 1964, the National Academy of Engineering (NAE) is a private, independent, nonprofit institution that provides engineering leadership in service to the nation. The mission of the National Academy of Engineering is to advance the well-being of the nation by promoting a vibrant engineering profession and by marshalling the expertise and insights of eminent engineers to provide independent advice to the federal government on matters involving engineering and technology.” <http://www.nae.edu/>

Within the NAE

“The overarching mission of **Center for Engineering, Ethics and Society (CEES)** is to engage engineering leaders in examining the ethical and societal challenges of engineering and bringing them to the attention of the engineering profession and society.” <http://www.nae.edu/26187.aspx>

“**The Online Ethics Center (OEC)** is maintained by the National Academy of Engineering (NAE) and is part of the Center for Engineering, Ethics, and Society (CEES). The CEES started in April 2007 and plans conferences and other research and educational activities under the direction of the CEES advisory group.” <http://www.onlineethics.org/>
